

Anaphylaxis and Treatment by Adrenaline Auto-Injectors

Learning summary

The learning covers anaphylaxis and how adrenaline administration is the first line of treatment for serious allergic reactions. Anaphylaxis can come on very quickly. As soon as you suspect anaphylaxis you must use an Adrenaline Auto-Injector (AAI) without delay.

Learning aims

This aim of this learning is to provide an awareness of the signs, symptoms and management of anaphylaxis. The learner will be able to demonstrate the use of the different types of auto injector.

Learning objectives

Learners will be able to:

- Describe the cause of anaphylactic shock and its treatment
- Recognise the symptoms of anaphylactic shock
- Describe the different types of auto-injector
- Define how and when to call the emergency services to access professional care for the customer
- Discuss the care procedure for the customer until professional help arrives

Applicable audiences	This learning is suitable for learners who are registered or non-registered that require anaphylaxis awareness and may be required to provide treatment				
Pre-requisites	There are no pre-requisites required for this learning				
Delivery method	This learning is delivered by a virtual classroom				
Duration	This learning will take 1 hour 30 minutes to complete				
Materials and resources required	Learners should have access to a computer with an internet connection and Microsoft Teams				
Refresher	This learning should be completed as required				
Minimum learners required	4	Maximum learners required	12	CPD points	1.5
